### COMPOSITION

**Francisco Arnalich Fernández.** Investigador "Ad Honorem". FIBHULP. Catedrático. Facultad de Medicina UAM. IdiPAZ. Universidad Autónoma de Madrid

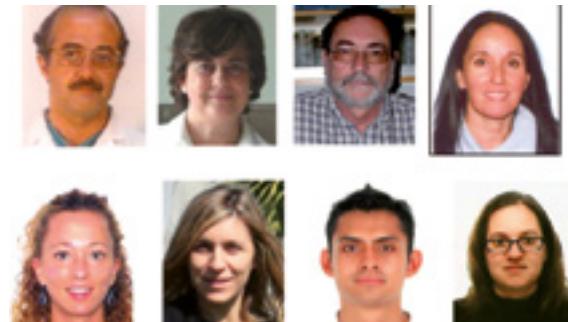

**José Luis Cedillo Mireles.** Investigador Predoctoral (contrato FPU). Universidad Autónoma de Madrid

**María del Carmen Fernández Capitán.** Jefa de Servicio de Medicina Interna. Hospital Universitario La Paz. Profesora asociada ciencias de la Salud. Facultad Medicina UAM.

**Carmen Montiel López.** Catedrática de Farmacología y Terapéutica. Facultad de Medicina. Universidad Autónoma de Madrid

**María Angustias Quesada Simón.** Facultativo Especialista de Área en Medicina Interna. Hospital Universitario La Paz. Profesora asociada ciencias de la Salud. Facultad Medicina UAM. Universidad Autónoma de Madrid

**Juan José Ríos Blanco.** Director Médico Hospital universitario La Paz. Profesor asociado ciencias de la Salud. Facultad Medicina UAM. director Médico. Hospital Universitario La Paz

### STRATEGIC OBJECTIVE

In the setting of the systemic response frequently found in patients attended in Internal Medicine wards, our group has studied some regulatory mechanisms of the innate immune response in patients with sepsis and other inflammatory states such as acute coronary syndromes (ACS), cystic fibrosis and cancer.

The first line of our research is the link between the parasympathetic and innate immune systems, that is the molecular mechanisms by which acetylcholine can influence the immune system via the "cholinergic anti-inflammatory pathway".

This pathway is mediated by the vagus nerve which releases acetylcholine to interact with the  $\alpha 7$  subunit of the nicotinic acetylcholine receptor ( $\alpha 7\text{nAChR}$ ).

We firstly reported that the neuronal  $\alpha 7$  nicotinic receptor subunit gene (CHRNA7) is partially duplicated in the human genome forming a hybrid gene (CHRFAM7A) with the novel FAM7A gene, and provided experimental data showing that dup $\alpha 7$  could modulate  $\alpha 7$  receptor-mediated synaptic transmission and cholinergic anti-inflammatory response (J Biol Chem 2011). The Toll-like receptor (TLR) plays an important role in the induction of the hyperinflammatory

response and tissue injury in sepsis. We found that the  $\alpha 7$  gene expression level in septic patients' peripheral blood mononuclear cells (PBMC) is a clinically relevant marker to assess the magnitude of the patient's inflammatory state, disease severity, and clinical outcome (J Infect Dis 2015).

Another exciting line of our research is the involvement of the  $\alpha 7$ -nicotinic receptor and its endogenous modulator dup $\alpha 7$  in human smoking-related tumors, and particularly their involvement in tobacco carcinogen-induced tumor development and chemotherapy resistance. This topic has attracted a grant from the Ministerio de Economía y Competitividad from 2014-2017. Besides, professor Jaime Renart who works in our team group, is doing new research on the molecular mechanisms of podoplanin, a type I transmembrane mucin widely known as a marker for lymphatic endothelial cells that has a critical role during development of the heart, lungs and lymphatic endothelial system. The expression of podoplanin is significantly enhanced during tissue remodelling processes and in several types of human cancer, including squamous cell carcinomas.

### RESEARCH LINES

- Molecular mechanisms involved in the innate immune response.
- Link between the parasympathetic and innate immune systems.

#### Collaborative research line:

- Adaptative immune response in human immunodeficiency virus (HIV) infection.
- Multicentric group: RIETE group (Registro Español de Enfermedad Trombo-Embólica).
- Mechanisms and clinical features of systemic autoimmune diseases.

- Molecular mechanisms of podoplanin during tissue modelling processes and in several types of human cancer.

#### Lines of study framed in basic research projects:

- Study of the pathophysiological role of nicotinic  $\alpha 7$  and  $\delta\mu\alpha 7$  receptors expressed in human macrophages, neurons and lung carcinoma cells.
- Identification of signalling pathways connecting nicotinic  $\alpha 7$  receptors and negative regulators of TLR-mediated inflammation in human macrophages.

### RESEARCH ACTIVITY

#### ● Doctoral theses

**Extremera Mazuela M.** Mecanismos moleculares de resistencia a cisplatino activados por consumo de tabaco en cáncer de pulmón.[dissertation]. Madrid: UAM; 2022(02/12/2022).

Directors: Montiel López C,  
Arnalich Fernández F.

#### ● Final Degree Theses

**López Caballero L.** Covid-19 en pacientes con enfermedades autoinmunes sistémicas y tratamiento inmunosupresor: características e influencia de la vacunación. Madrid: UAM; 2022.

Directors: Ríos Blanco JJ,  
Álvarez Troncoso J
